## Perth's horizontal directional drilling professionals

At Evale Drilling, our core values underpin every project we support.

## INTEGRITY

We believe in building long-term relationships with our clients that are based on trust and exceptional customer service.

## TEAMWORK

We understand working collaboratively within our team and with our clients is integral to the delivery of projects on time and on budget.

## QUALITY

We take great pride in delivering quality services to support a range of industries.

## ABOUT EVALE DRILLING

Established in 2022, Evale Drilling is part of the Evale Group and THM Electrical and Communications. This means we have access to additional services - from electricians and truck/trailer/digger equipment hire - to complement a variety of client needs.

At Evale Drilling, we specialise in horizontal underground directional drilling (also known as directional boring) - a steerable, trenchless method of installing underground pipe, conduit or cable using a drill rig.

Our team of 15 staff include qualified, experienced excavator operators, directional drillers, service locators and vacuum excavation operators. Based in Perth, we are experienced in traffic management practices and are First Aid trained.

As part of our commitment to quality, we adhere to ISO 9001 - OHSAS18001 and ISO14001 Management System Standards.

## CAPABILITIES

At Evale Drilling, our capabilities include service locating, horizontal directional drilling, and vacuum excavation to support commercial and residential construction sites, telecommunication, utility, and mining companies across Australia.

### Service locating

Our team of experienced professionals identify the presence and precise location and depth of underground pipes and cables that contain electrical currents, telecommunications, gas, water, sewer and storm water.

This ensures we can understand the environments we are working in and can implement measures to avoid / minimise disruption to services. This is particularly valued by our sub-development, construction, utility, and mining clients.

### Horizontal directional drilling

We use drill rigs to install underground utilities such as pipes, service conduit or cables. We can complete works through a variety of surfaces including road, landscapes, and river crossings.

This method has minimal impact to surrounding gardens, footpaths and driveways which leaves our clients satisfied.

### Vacuum excavation

Our vacuum excavation service combines high-pressure water with an air vacuum to remove mud, dirt, and slurry from around underground utilities.

This essential service helps support safe and clean sites and is a must-have in any underground project.

Whether you are looking for support for a day or for several months, we are available to assist.

## OUR CLIENTS

Our clients contact Evale Drilling because we are reliable, efficient and value working collaboratively to achieve quality, timely outcomes.

We take the time to understand the client's requirements and are thorough in our scoping and quoting process to ensure a safe site and quality result.

Our drill rigs are regularly serviced and maintained to ensure we always work safely, and our equipment is readily available. Plus, our smaller rigs mean we can access the challenging areas our competitors can not and this makes us unique.

### Our clients include:

- NBN
- Downer
- Optus
- Fulton Hogan
- Genus Group
- Power on Cabling
- Western Power

Based in Perth, we provide horizontal directional drilling and supporting services across Western Australia.
